

The Theory of Cobond

a New Form for Human Civilization

Ending the Russia-Ukraine War:

A Century-Long Peace Architecture

for Europe Based on Human Civilization Engineering

*The Foundational Work of Human Civilization
Engineering.*

A New Architecture for Lasting World Peace.

*An Engineering Blueprint for the Community of
Shared Future for Mankind.*

By

Zhang Xu (China)

Victor de Oliveira Libérale (Brazil)

Preprint Edition — Original Work in Chinese, 740,000 Chinese characters

We sincerely invite readers worldwide who share a deep concern for the peace and destiny of humanity to join us in refining this blueprint for the future of human civilization and in bringing it to more languages.

The Cruel Reality

In 2026, the Russia-Ukraine War, now in its fifth year, has laid bare the structural limits of the Westphalian sovereign state system when faced with zero-sum security dilemmas. Existing peace proposals — whether territorial partition, neutrality regimes, or third-party security guarantees — fail to dissolve the underlying zero-sum structure. They merely redistribute the slices of a fixed pie, leaving the root of conflict intact. Any outcome built on this paradigm, whether military victory or temporary ceasefire, will only serve as a prelude to an even more intense future confrontation.

Everyone is talking about victory, ceasefires, and sanctions, yet a fundamental problem remains: within the existing paradigm of conflict between sovereign states, regardless of which side wins or whether the front lines are frozen, it is merely a prelude to the next, even more intense war—a deadlock with no solution.

All existing peace plans share a fatal flaw: they redistribute slices of a zero-sum cake without dissolving the zero-sum structure itself.

War has plagued humanity for thousands of years, and the current international security framework is on the verge of collapse, having failed to meet humanity's shared security needs. Can we design a new form of relationship from an engineering perspective that would make war impossible at its very root? This is the Cobond — defined as a community of security and shared destiny formed by independent sovereign entities through the sharing of core state functions — is a new form of interstate relationship and a new form for human civilization.

The *Cobond* — defined as a community of security and shared destiny formed by independent sovereign entities through the sharing of core state functions — as a new form for interstate relations grounded in *Human Civilization Engineering*. Its core thesis is radical yet straightforward: war cannot be permanently ended by victory, sanctions, or ceasefire treaties, but only by re-engineering the interstate security structure itself. At its heart lies the architecture of *sovereign independence + military interlocking*: states retain full sovereign legitimacy, while their core security functions are deeply intertwined to render mutual aggression structurally impossible.

Cobond: A New Form for Human Civilization.

Cobond: Coined from a Chinese term 共邦 Gòngbāng; pronunciation: /^lkəʊbɒnd/ UK, /^lkoʊbænd/ US.

Cobond (General): A symbiotic relationship structure composed of multiple independent entities, where shared core functions lead to the formation of a secure and interdependent community of destiny.

Cobond (International Politics): A symbiotic relationship formed by multiple independent entities, with shared interlocking in the security domain and independence in all other domains.

Three Fundamental Axioms:

- ① Axiom of Survival: The primary purpose of life is survival and continuity.
- ② Axiom of Form Serving Life: Form serves individual life; Civilizational form serves individual human beings; State form exists to serves the people.
- ③ Axiom of the Perfect Paradox: Imperfection is the foundation of existence and the driving force behind evolution.

Four Architectural Pillars:

- ① Sovereign Independence: Each maintains its own system, independent and free.
- ② Military Interlocking: Shared, mixed-formation forces; symbiotic security.
- ③ Social Integration: Intertwined interests; symbiotic development.
- ④ Civilization Perpetual Prosperity Covenant: Cyclical hedging; perpetual sustainability

of civilization.

Blueprint for Implementation

This book goes beyond theory; it outlines actionable blueprints for resolving core global conflicts of various types :

- ① Rus Cobond: A framework designed for a century of peace between Russia and Ukraine featuring Military Interlocking between the two nations, allowing the people of both countries to live and thrive freely on this land.
- ② Middle East Cobond: A peace framework designed for Israel and the Arab world—internal unity of sovereignty and parallel governance in Israel, while externally coexisting with the Arab world through a "security anchor chain" and a "solid network of shared interests, thereby expanding mutual development boundary.
- ③ Caucasus Cobond: A peace architecture designed for Armenia and Azerbaijan—transforming the "land of wars" into an "Eurasian land bridge" through military interlocking, enabling a region plagued by long-standing conflict to find a path to coexistence.
- ④ American Cobond: A transformation pathway designed to shift the United States from a “hegemonic dilemma” to a “civilizational engine” —focusing on diagnosing its dual structural dilemmas of internal student loan oppression and external hegemonic expansion.

These case studies cover conflict scenarios of varying types and complexities, demonstrating the adaptability and feasibility of the Cobond framework.

The Ship of Human Civilization's Destiny

The anchor chain is the foundation of our safety; it withstands storms, stabilizes the ship, and secures our stability.

The sturdy net is the path to our prosperity; woven with connections, through collaborative labor, it yields bountiful harvests.

The engine is our eternal source of power; breaking free from cycles, it drives us forward continuously toward everlasting prosperity.

Hegemony, aggression, and oppression—these products of the old order will ultimately be replaced by a new form of civilizational symbiosis.

An Invitation: An Interstellar Journey of the Mind

Cobond is not a choice; it is a law of survival etched into our very genes.

Cobond , vast and boundless, is the fundamental logic of symbiosis on a cosmic scale.

Cobond , so close to us, is the vibrant, smoke-filled essence of the wisdom we gain from our daily lives.

Welcome aboard this Cobond intellectual starship. This voyage will trigger an unprecedented leap in your thinking. We will journey into the depths of the vast cosmos to explore and learn together about the miracles of symbiosis in the microscopic world, the laws of life’ s survival, the mysteries of social relationships, and even the logic of civilizational survival on a cosmic scale.

You will no longer be merely a reader, but an explorer and chief engineer on this voyage. We will pursue advanced studies at the “Academy of Human Civilization Engineering” to master the skills needed to design the blueprint for the next generation of human civilization. Then, looking back from the depths of the cosmos at our distant and tiny home, Earth, we will build skyscrapers of peace and shared prosperity on the ruins of human wars and conflicts. We will design and create various forms of civilization that benefit all of humanity, achieving a civilizational leap from war and conflict to peaceful coexistence, and from competition and confrontation to symbiotic prosperity.

The captain is at the helm, the star chart is unfurled—please join us as we set sail immediately.

Glossary

1. Cobond: Coined from a Chinese term 共邦 Gòngbāng; pronunciation: /^lkəʊbɒnd/ UK, /^lkouband/ US.

Cobond (General): A symbiotic relationship structure composed of multiple independent entities, where shared core functions lead to the formation of a secure and

interdependent community of destiny.

Cobond (International Politics): A symbiotic relationship formed by multiple independent entities, with shared interlocking in the security domain and independence in all other domains.

2. Military Interlocking (Anchor Chain of Shared Security): Member states form a structural relationship in the realm of military security characterized by sovereign independence and shared governance, featuring deep transnational integration, borderless coverage, and routine, sustained operations.

3. Society Integration (A Strong Network of Shared Interests): Build a social ecological network in which members are highly interconnected and interdependent, so that the prosperity and stability of any single member are deeply dependent on the healthy functioning of the entire community, making the preservation of the community the rational choice that best serves their respective interests.

4. Covenant for the Eternal Prosperity of Civilization (Engine of a Shared Destiny): Establish a robust mechanism for the circulation and reinvestment of capital to infuse the journey with eternal momentum and drive the civilization toward enduring prosperity.

5. Cobond Architecture: The sum of all components that constitute a Cobond.

6. The Theory of Cobond: The title of this book, which presents a theory examining the forms of Cobond relations.

7. The Axiom of Survival (The Theory of Life Continuation): The primary purpose of life is survival and continuity.

8. Form: The appearance or manifestation of a thing—used throughout this book to denote the structural patterns through which life, society, civilization, and the state express themselves.

9. Ideology: A relatively comprehensive and self-consistent system of ideas, beliefs, and value judgments used to interpret the world and guide action.

10. Ideological Confrontation: A systematic, exclusive, and zero-sum intellectual and

political struggle between different ideological systems over which set of ideas is correct, superior, and definitive.

11. Civilization: The sum total of material and spiritual achievements created by humankind in the course of social development.

12. Axiom of Form Serving (The Theory of Form Serving): Form serves the individual living being - The Essential Mission of Form.

13. Civilization Form exists to serve individual human beings - The Fundamental Mission of Civilization.

14. State form exists to serve the people - The Fundamental Mission of State.

15. Axiom of the Perfect Paradox (The Theory of Imperfect Evolution): Imperfection is the foundation of existence and the driving force behind evolution.

16. Form Optimization: The process of dynamically adjusting the Form based on service performance evaluations.

17. Form Deviation: The process of structural adjustment or change that results in reduced service effectiveness.

18. State Form Optimization: To better serve the people, adjustments and changes are made to the state form.

19. State Form Deviation: A deviation from the form that serves the entire people.

20. Liro (Profit-Snare): A portmanteau of Li (利, profit) and Luo (罗, snare/trap), denoting both: (a) the general phenomenon of being lured into a trap by the pursuit of short-term gains, ultimately leading to self-entanglement and destruction; and (b) the specific geopolitical confrontation between the United States (Li) and Russia (Luo), two major military powers, which is dragging humanity into a trap and putting it at risk of destruction.

21. Liroism: The adherence to Liro's ideas and behavioral patterns.

22. Black Hole Logic: An evolutionary model in which a system—be it a celestial body, a

civilization, an economy, an organization, or an individual—by continuously devouring external resources, expanding its scale, and pursuing absolute centralized control, ultimately crosses its own critical threshold and irreversibly spirals toward collapse, isolation, and nothingness.

23. Parasitic Criticism: In the process of thinking, creating, or collaborating, individuals or groups habitually intervene with the aim of criticism and nitpicking rather than constructive engagement. This behavioral pattern involves a severe imbalance in terms of responsibility, risk, and reward, and essentially constitutes a one-sided drain on the mental energy of creators and the public discourse environment.

24. Distributed Civilization Architecture: The Next-Generation Architecture for Human Civilization.

25. Human Civilization Engineering: Using *The Theory of Life Continuation*, *The Theory of Form Serving*, and *The Theory of Imperfect Evolution* as the foundation of materials engineering, and taking *The Theory of Cobond* as the core system architecture, it employs systems theory and engineering methodologies to design and create a civilizational form that benefits all of humanity, thereby achieving a transformative leap in human civilization from conflict and opposition to symbiosis and prosperity.

26. Academy of Human Civilization Engineering (AHCE): An educational and research institution focused on “Human Civilization Engineering” established in conflict-affected regions where the Cobond architecture and spirit have already been successfully implemented.

27. Military of Human Civilization Engineering: An emerging interdisciplinary strategic field that views military power as a critical “tool of civilizational engineering” that can be strategically planned and deployed. At its core lies the application of engineering's systems thinking and design methodologies to reconfigure military power, elevating its core mission from the traditional goals of “winning wars between nations” and “defending sovereignty” to “safeguarding the fundamental conditions for the survival and development of human civilization” and “managing internal and external risks at

the civilizational level.”

28. Sociology of Human Civilization Engineering: A proactive design discipline that applies engineering thinking to the construction and optimization of human super-large-scale social systems. It is responsible for “social suturing” at the fault lines of civilization, as well as for “social healthcare” and “system upgrades” within civilizational communities.

29. Economics of Human Civilization Engineering: A foundational discipline that reconstructs economic theory and practice from the ultimate perspective of the overall survival and evolution of human civilization. By applying the systematic design thinking of engineering, it diagnoses and resolves the deep-seated ills of “Liroism” —which lead to resource misallocation, cyclical crises, and the unsustainability of civilization—within current economic models. It designs and establishes institutional frameworks and resource allocation mechanisms capable of ensuring that resources serve the goals of civilization's overall survival and prosperity in a sustainable, stable, and equitable manner over millennia or even longer timeframes.

30. Finance of Human Civilization Engineering: A discipline of financial engineering and institutional design that studies how to hedge against the risks of short-sightedness in civilizational systems and ensure their long-term survival through institutionalized capital accumulation and strategic allocation. It is founded on the following understanding: a civilization is like a living organism, and its greatest systemic risk does not stem from external shocks, but from an internal, cyclical tendency toward “Liroism” —that is, overdrawing on the future for short-term gains. The core mission of this discipline is to design and maintain an institutionalized immune system known as the “Civilization Perpetual Prosperity Fund” , transforming it into a stabilizer and regenerative reservoir that enables civilization to resist its “Liro” self-destructive tendencies.

31. Shield of Freedom: The right of members to withdraw from Cobond without conditions.

32. Rus Cobond: The Cobond comprising Russia and Ukraine (later including Belarus).

33. European Cobond: The Cobond comprising European nations.
34. Middle East Cobond: The Cobond comprising Middle Eastern countries (including Israel and other Arab nations).
35. Caucasus Cobond: The Cobond comprising Armenia and Azerbaijan (and later including Georgia and other countries).
36. American Cobond: The new United States Cobond dedicated to serving the American people and contributing to the world.
37. Earth Cobond: The community of shared security and destiny comprising all nations of the world.
38. Earth Cobond Force: The military force composed of personnel from all nations worldwide; it cannot attack any member state.
39. Cosmic Cobond: The community of shared security and destiny comprising all planetary civilizations in the universe.
40. Cosmic Cobond Force: The military force composed of mixed units from all civilizations across the universe; it cannot attack any of its member planets.
41. The Nuclear Weapons Paradox: Nuclear weapons function as tools of political and strategic deterrence rather than as military weapons; they are political props disguised as weapons. In conventional warfare, their sole purpose lies in never being used. Once deployed as actual weapons, they immediately lose all deterrent value, and the strategic logic underpinning them collapses.
42. The Twilight of the Aircraft Carrier Era: Denotes the onset of the decline of U.S. unipolar hegemony and the advent of the era of unmanned warfare, precipitated by the United States' defeat in the 2026 war with Iran.
43. The Refrigerator Paradox: The original purpose of a refrigerator is to keep food fresh, but in practice, it often becomes a tool that causes food to spoil.
44. Zero-sum game: In such activities, one party's gain necessarily means the other party's

loss, and the sum of both parties' gains and losses is always zero. This is commonly seen in gambling, market competition, and certain types of political or military conflicts.
